"Required Reading" Marine Corps Professional Reading Program Bluejacket Paperback Book Series In this riveting insider's chronicle, legendary Marine General "Brute" Krulak submits an unprecedented examination of U.S. Marines—their fights on the battlefield and off, their extraordinary esprit de corps. Deftly blending history with autobiography, action with analysis, and separating fact from fable, General Krulak touches the very essence of the Corps: what it means to be a Marine and the reason behind its consistently outstanding performance and reputation. Krulak also addresses the most basic but challenging question of all about the Corps: how does it manage to survive—even to flourish—despite overwhelming political odds and, as the general writes, "an extraordinary propensity for shooting itself in the foot?" To answer this question Krulak examines the foundation on which the Corps is built, a system of intense loyalty to God, to country, and to other Marines. He also takes a close look at Marines in war, offering challenging accounts of their experiences in World War II, Korea, and Vietnam. In addition, he describes the Corps's relationship to other services, especially during the unification battles following World War II, and offers new insights into the decision-making process in times of crisis. First published in hardcover in 1984, this book has remained popular ever since with Marines of every rank.

Combat Stress Injury represents a definitive collection of the most current theory, research, and practice in the area of combat and operational stress management, edited by two experts in the field. In this book, Charles Figley and Bill Nash have assembled a wide-ranging group of authors (military / nonmilitary, American / international, combat veterans / trainers, and as diverse as psychiatrists / psychologists / social workers / nurses / clergy / physiologists / military scientists). The chapters in this volume collectively demonstrate that combat stress can effectively be managed through prevention and training prior to combat, stress reduction methods during operations, and desensitization programs immediately following combat exposure.

P. W. Singer explores the greatest revolution in military affairs since the atom bomb: the dawn of robotic warfare We are on the cusp of a massive shift in military technology that threatens to make real the stuff of I, Robot and The Terminator. Blending historical evidence with interviews of an amazing cast of characters, Singer shows how technology is changing not just how wars are fought, but also the politics, economics, laws, and the ethics that surround war itself. Travelling from the battlefields of Iraq and Afghanistan to modern-day "skunk works" in the midst of suburbia, Wired for War will tantalise a wide readership, from military buffs to policy wonks to gearheads.

During the early 1990s, the Department of Defense (DoD) began to change its focus from the Cold War to pursue more diverse missions. Questions arose about how future changes in military missions, organizations, and technology would affect the nature of military work and the characteristics of the military and civilian members of the DoD workforce. To address these questions, RAND undertook an occupational-level analysis of the effects of the future environment on the characteristics of DoD work and workers.
