In this book, a team of outstanding scientists in the field of modern magnetic nanotechnologies illustrates the state-of-the-art in several areas of advanced magneto-electronic devices, magnetic micro-electromechanical systems and high density information storage technologies. Providing a unique source of information for the young physicist, chemist or engineer, the book also serves as a crucial reference for the expert scientist and the teacher of advanced university courses.

Technology has opened a wide window of novel communication methods and techniques and has become ubiquitous in modern society. With advancements occurring rapidly and transforming practices and efficiencies within all fields including business, education, medicine, engineering, and so on, it is important to remain up to date on the latest research findings. Human-Computer Interaction and Technology Integration in Modern Society is a critical reference source that examines the integration of technological innovations into every aspect of modern society including education and business. Highlighting important topics that include digitization, human development, knowledge management, and open innovation, this book is ideal for IT specialists, policymakers, professionals, academicians, researchers, practitioners, and students.

Modern Approaches to Animal Cell Technology is a collection of papers presented at the 1987 joint European Society for Animal Cell Technology-OHOL conference held in Tiberias, Israel. Contributors explore modern approaches to animal cell technology and discuss the construction of the animal cell substrate, the physiology of those cells in a bioreactor type of environment, and the ways in which different products can be made from animal cells in culture and tested. This book is comprised of 59 chapters divided into nine sections and begins by outlining the history of issues and decisions that were made regarding the acceptability of various cell substrates, along with the use of continuous cell lines in biotechnology. The next chapter explores the feasibility, reproducibility, and the sensitivity of the dot-blot filter hybridization test to detect minute amounts of residual cellular DNA. The reader is then introduced to cells and cell lines such as monoclonal antibodies; cell growth and development; physiology of cells; and the use of bioreactors for culturing animal cells. Downstream unit processes, vaccines, immune system products, and toxicity testing with animal cells are also considered. This monograph will be a valuable resource for animal-cell technologists, biotechnologists, and microbiologists.

Attacks on information systems and applications have become more prevalent with new advances in technology. Management of security and quick threat identification have become imperative aspects of technological applications. Information Technology Risk Management and Compliance in Modern Organizations is a pivotal reference source featuring the latest scholarly research on the need for an effective chain of information management and clear principles of information technology governance. Including extensive coverage on a broad range of topics such as compliance programs, data leak prevention, and security architecture, this book is ideally designed for IT professionals, scholars, researchers, and academicians seeking current research on risk management and compliance.

In fields as diverse as research and development, governance, and international trade, success depends on effective communication. However, limited research exists on how professionals can express themselves consistently across disciplines. Modern Trends Surrounding Information Technology Standards and Standardization within Organizations showcases the far-ranging economic and societal ramifications incited by technical standardization between individuals, organizations, disciplines, and nations. This publication serves as a valuable model for inter-disciplinary scholars, IT researchers, and professionals interested in the link between technology and social change in an increasingly networked and interconnected global society.

The Indian plastic and polymer industry has taken great strides. In the last few decades, the industry has grown to the status of a leading sector in the country with a sizable base. The material is gaining notable importance in different spheres of activity and the per capita consumption is increasing at a fast pace. Continuous advancements and developments in polymer technology, processing machineries, expertise and cost effective manufacturing is fast replacing the typical materials in different segments with plastics. Plastics play a very important role in our daily lives. Throughout the world the demand for plastic, particularly plastic packaging, continues to rapidly grow. Polymer processing industry deals with the manufacture and production of polymer and synthetic substances for example acrylic plastics: poly (methyl methacrylate), poly vinyl chloride (PVC), polyamides, polyesters, cellulose plastics etc. Plastic is incredibly versatile and can be made from different ingredients, moulded into any shape, and put to a huge range of uses across industry and the rest of society. Polymer Energy system is an award winning, innovative, proprietary process to convert waste plastics into renewable energy. Polymers are the most rapidly growing sector of the materials industry. No wonder polymers are found in everything from compact discs to high tech aerospace applications. On the basis of value added, Indian share of plastic products industry is about 0.5% of national GDP. This book majorly deals with properties and applications of engineering, the strength of thermoplastic composites, and the application of thermoplastic structural composites, applications of differential scanning, calorimetry and polymer

characterization, polymer degradation and stabilization, advances in photo degradation and stabilization of polyurethanes and so on. This book also consists of raw material suppliers for plastic and plastic products, manufacturers of plastic processing machinery, plastics processing machinery and equipment (foreign), machinery and equipment for plastic converting, extruders and extrusion lines, injection moulding machines and so on. This book offers, in standardized and readily accessible information on the synthesis, structure, properties and applications of the most important polymeric materials. It has been designed as a text giving a balanced coverage of the science and technology of polymers finding major applications plastics. This book is very useful for industrialists, consultants, research scholars and institutes.

In *Driving toward Modernity*, Jun Zhang ethnographically explores the entanglement between the rise of the automotive regime and emergence of the middle class in South China. Focusing on the Pearl River Delta, one of the nation's wealthiest regions, Zhang shows how private cars have shaped everyday middle-class sociality, solidarity, and subjectivity, and how the automotive regime has helped make the new middle classes of the PRC. By carefully analyzing how physical and social mobility intertwines, *Driving toward Modernity* paints a nuanced picture of modern Chinese life, comprising the continuity and rupture as well as the structure and agency of China's great transformation.
