Printed on Demand. Contact [books@worldbank.org](mailto:books@worldbank.org), if currently unavailable. World Bank Technical Paper 207. Development projects that encourage direct community participation usually meet with greater success than those that do not. This guidebook describes ways of letting poor people help monitor and evaluate the water and sanitation programs that serve them. It provides simple shortcuts for building community participation and consensus. Decisionmakers will learn the different risks posed by this approach, such as viewing community participation as a panacea. The study describes ways to set reasonable goals without discouraging unexpected progress. It provides a handy framework of key indicators that can be used to monitor progress. These indicators gauge a project's cost, sustainability, and effectiveness. They rate a community's ability to expand services and handle more operating responsibilities. Also available in French: (ISBN 0-8213-2782-8) Stock No. 12782.

The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of *A Beautiful Mind*. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

"This book contains authentic photographs and salient facts covering 358 troopships used in World War II. In addition, other vessels of miscellaneous character, including Victory and Liberty type temporary conversions for returning troops, are listed in the appendices ..." --Pref.

A fearless young woman from a small African village starts a revolution against an American oil company in this sweeping, inspiring novel from the New York Times bestselling author of *Behold the Dreamers*. "Mbue reaches for the moon and, by the novel's end, has it firmly held in her hand." —NPR We should have known the end was near. So begins Imbolo Mbue's powerful second novel, *How Beautiful We Were*. Set in the fictional African village of Kosawa, it tells of a people living in fear amid environmental degradation wrought by an American oil company. Pipeline spills have rendered farmlands infertile. Children are dying from drinking toxic water. Promises of cleanup and financial reparations to the villagers are made—and ignored. The country's government, led by a brazen dictator, exists to serve its own interests. Left with few choices, the people of Kosawa decide to fight back. Their struggle will last for decades and come at a steep price. Told from the perspective of a generation of children and the family of a girl named Thula who grows up to become a revolutionary, *How Beautiful We Were* is a masterful exploration of what happens when the reckless drive for profit, coupled with the ghost of colonialism, comes up against one community's determination to hold on to its ancestral land and a young woman's willingness to sacrifice everything for the sake of her people's freedom.

It provides a rigorous and comprehensive assessment of the amounts of plutonium and HEU in military and civilian programmes, in nuclear and non-nuclear weapon states, and in countries seeking to acquire nuclear weapons. The capabilities that exist for producing these materials throughout the world are examined in depth. The book concludes with a thorough examination of policies on the control and disposition of fissile materials and makes a number of important new proposals.
