Photonic devices lie at the heart of the communications revolution, and have become a large and important part of the electronic engineering field, so much so that many colleges now treat this as a subject in its own right. With this in mind, the author has put together a unique textbook covering every major photonic device, and striking a careful balance between theoretical and practical concepts. The book assumes a basic knowledge of optics, semiconductors and electromagnetic waves. Many of the key background concepts are reviewed in the first chapter. Devices covered include optical fibers, couplers, electro-optic devices, magneto-optic devices, lasers and photodetectors. Problems are included at the end of each chapter and a solutions set is available. The book is ideal for senior undergraduate and graduate courses, but being device driven it is also an excellent engineers' reference.

New Perspectives on Grammar Teaching in Second Language Classrooms brings together various approaches to the contextualized teaching of grammar and communicative skills as integrated components of second language instruction. Its purpose is to show from both theoretical and practical perspectives that grammar teaching can be made productive and useful in ESL and EFL classrooms. In this text: *First-rate scholars approach the teaching of grammar from multiple complementary perspectives, providing an original, comprehensive treatment of the topic. *Discourse analysis and research data are used to address such pedagogical areas as grammatical and lexical development in speaking, listening, reading, and writing. *The communicative perspective on ESL and EFL instruction that is presented provides ways for learners to enhance their production skills, whereas the meaning-based grammar instruction can supplement and strengthen current methodology with a communicative focus. This volume is intended as a foundational text for second language grammar pedagogy courses at the advanced undergraduate and master's levels.

Extrait de la couverture : "The Pukhtun society of the Swat valley in the North West Frontier Province, Pakistan, is at the crossroads of social transformation and change. The Mghan Yusafzai tribe, which migrated from Kabul more than five hundred years ago and settled in the Swat valley, has retained its particular tribal culture and characteristics to this day. It was during the last century that the culture of Yusufzai Pukhtuns, residing on this side of the Durand Line, began to be influenced by the regional historical and geo-political forces. From a rural tribal society, governed by the centuries old tribal code - Pukhtunwali - the Pukhtuns have been gradually urbanising, responding to the emerging socio-economic and historical changes. The transformation is not without its ramifications - social conflicts, breakdown of old tribal social structures and values, unplanned economic growth and its adverse effects on the natural resource base of the lush green valley, often compared with Switzerland for its scenic beauty. This book chronicles the process of urbanisation and change in the broader context, embracing the history, geography, agriculture and economics, demography and migration, culture and politics of the Swat valley. It analyses the impact of abolition of the traditional Wesh system of land distribution, merger of the State of Swat within the nation-state of Pakistan, the increasing influence of religious groups subsequent to the Soviet occupation of Afghanistan and the advent and decline of the Taliban, the remittance economy and tourism, and the donor-funded development projects that have a bearing on the process of urbanisation. What emerges is an insightful picture of the contemporary Swat valley, leading to a better understanding of the complex forces that are transforming its tribal Pukhtun society."

This story tracks the lives of a married couple in New York, through various difficult and tragic events involving a cut glass bowl they received as a wedding gift.

"Functional Materials textbook is not simply a review of the vast body of literature of the recent years, as it holds the focus upon various aspects of application. Moreover, it selects only a few topics in favor of a solid and thorough treatment of the relevant aspects. This book comes in a good time, when a large body of academic literature has been accumulated and is waiting for a critical inspection in the light of the real demands of application." Professor Gerhard Wegner, Max-Planck Institute for Polymer Research, Mainz, Germany The chapters cover three important fields in the development of functional materials: energy, environment, and biomedical applications. These topics are explained and discussed from both an experimental and a theoretical perspective. Functional organic and inorganic materials are at the center of most technological breakthroughs. Therefore, the understanding of material properties is fundamental to the development of novel functionalities and applications.

Book 3 covers the topics of Wave Motion, which lays the foundation of physics and the concepts are also used in other sections of the syllabus. Moreover, this section carries a significant weight in the HKDSE examination. It takes time for students to grasp the concepts and master the necessary skills in solving problems. Some examination questions on this section cover integrated topics and require candidates' ability to comprehend an unfamiliar situation and to apply suitable knowledge in solving problems. In this book, although topics are grouped clearly in different chapters, some questions in a later chapter require application of knowledge learned in previous chapters. This will help candidates to consolidate their knowledge and to build up their confidence in tackling problems demanding higher order skills.
