Better known for audio books, Myanonamouse has a larger and friendly community with some strict rules.

Javascript Regular Expressions

Regular expressions are patterns used to match character combinations in strings. In JavaScript, regular expressions are also objects. These patterns are used with the exec () and test () methods of RegExp, and with the match (), matchAll (), replace () , search (), and split () methods of String. This chapter describes JavaScript regular expressions.

Regular expressions - JavaScript | MDN

A regular expression is an object that describes a pattern of characters. Regular expressions are used to perform pattern-matching and "search-and-replace" functions on text. Syntax /

JavaScript RegExp Reference - W3Schools

In JavaScript, regular expressions are often used with the two string methods: search () and replace (). The search () method uses an expression to search for a match, and returns the position of the match. The replace () method returns a modified string where the pattern is replaced. Using String search () With a String

JavaScript Regular Expressions - W3Schools

You can use the following flags on any regular expression: g: makes the pattern multiple times i: makes the regex case insensitive m: enables multiline mode. In this mode, ^ and \$ match the start and end of the whole string. Without this, with... u: enables support for unicode (introduced in ...

A guide to JavaScript Regular Expressions - Flavio Copes

In JavaScript, regular expressions are represented by RegExp object, which is a native JavaScript object like String, Array, and so on. There are two ways of creating a new RegExp object — one is using the literal syntax, and the other is using the RegExp () constructor.

Regular Expressions in JavaScript: a CheatSheet - DEV

Syntax pattern – A string that specifies the pattern of the regular expression or another regular expression. attributes – An optional string containing any of the "g", "i", and "m" attributes that specify global,...

Regular Expressions and RegExp Object - Tutorialspoint

The constructor of the regular expression object—for example, new RegExp ('ab+c') —results in runtime compilation of the regular expression. Use the constructor function when you know the regular expression pattern will be changing, or you don't know the pattern and obtain it from another source, such as user input.

RegExp - JavaScript | MDN

The previous example can be extended. We can create a regular expression for emails based on it. The email format is: name@domain. Any word can be the name, hyphens and dots are allowed. In regular expressions that's [-\w]+. The pattern:

Capturing groups - JavaScript

Regular expressions Regular expressions is a powerful way of doing search and replace in strings.

Regular expressions - JavaScript

Regular expressions are a way to describe patterns in string data. They form a small, separate language that is part of JavaScript and many other languages and systems. Regular expressions are both terribly awkward and extremely useful. Their syntax is cryptic, and the programming interface JavaScript provides for them is clumsy.

Regular Expressions :: Eloquent JavaScript

A JavaScript Regular Expression is an object, describing a pattern of characters in JavaScript. These help to match character combinations in a String. To make things easier for you, JavaScript also provides a regular expression object. Let's try to understand it with something we can relate to.
