Most psychotherapists see clients whose problems are compounded by the effects of trauma. Whether the trauma is recent or is still unresolved from childhood, whether it was evoked by a natural disaster or an accident or an assault, the effects can be both deep and enduring—and can have a significant impact on the outcome of treatment.

...  
The majority of research examining posttraumatic stress symptoms/disorder (PTSS/PTSD) amongst adult survivors of childhood cancer has been oriented to cancer, assuming that cancer has been the most traumatic experience in their lives. Whether that assumption is valid, and how it might impact assessment of PTSS is unknown.

The Posttraumatic Stress Diagnostic Scale (PDS) is a 49-item self-report measure designed to assess all the DSM-IV diagnostic criteria for PTSD.<sup>22,23</sup> The PDS, which is based on the self-report counterpart of the PSS-I (PSS-SR) is the only stand-alone instrument that assesses all DSM-IV criteria.<sup>18</sup> It was designed as a screening instrument to identify PTSD in the general population or in a population of trauma survivors.

## **Assessment and Diagnosis of Posttraumatic Stress Disorder**

The PDS-5 begins with two trauma screen questions to assess trauma history and identify an index trauma. An item for each of the 20 DSM-5 PTSD symptoms is included, and an additional four items ask about distress and interference caused by PTSD symptoms as well as onset and duration of symptoms.

A positive response to the screen does not necessarily indicate that a patient has Posttraumatic Stress Disorder. However, a positive response does indicate that a patient may have PTSD or trauma-related problems, and further investigation of trauma symptoms by a mental health professional may be warranted.

## **PTSD Screening Instruments - PTSD: National Center for PTSD**

The accurate assessment of psychological symptoms is an essential component of developing a helpful formulation regarding a client's difficulties. Psychological scales and measures play a role in diagnosis, hypothesis-testing, formulation, and ongoing assessments of client's progress in treatment.

## Assessment of ...

This chapter discusses the symptoms, epidemiology, assessment, and treatment of combat-related post-traumatic stress disorder (PTSD) in active duty service members and veterans. Two treatment protocols for PTSD—prolonged exposure (PE) therapy and cognitive processing therapy (CPT)—have been identified as the treatments with the strongest scientific support for their efficacy.

## Posttraumatic Stress Disorder - Oxford Clinical Psychology

The presence of post-traumatic stress disorder was not related to the type of accident, age of the child, or the nature of injuries but was significantly associated with sex, previous experience of trauma, and subjective appraisal of threat to life. None of the children had received any psychological help at the time of assessment.
